

Energas to Drill New Well in Parkway Project

Oklahoma City, OK – (Business Wire) – June 20, 2006 – Energas Resources, Inc. (OTCBB: EGSR) today announced the current strategy for the Parkway Project in eastern Kentucky. We have been advised that the best course of action is to drill a new well in order to obtain up to date electric log information.

“This is the most sensible next step in order to develop the Parkway property. New logs will give us the information needed to design the proper frac stimulation treatment,” stated Scott Shaw, Vice President.

Energas has obtained a drilling permit and has ordered a rig to begin drilling as soon as the rig becomes available. This well is permitted to be drilled to 3,900 feet to test the Knox formation. Further announcements will be forthcoming.

Safe Harbor Statement

When used in this press release, the words “intends,” “believes,” “anticipated” and “expects” and similar expressions are intended to identify forward-looking statements. Such statements are subject to risks and uncertainties, which could cause actual results to differ materially from those projected. Factors that could cause or contribute to such differences include normal risks associated with oil and gas drilling activities. In addition, adverse weather conditions can hinder or delay operations, as can shortages of equipment and materials or unavailability of drilling, completion, and/or work-over rigs. Even though a well is completed and is found to be productive, water and/or other substances may be encountered in the well, which may impair or prevent production or marketing of oil or gas from the well.
